## GNSS-INERTIAL DIRECT GEOREFERENCING WITH INTEGRATED FLIGHT MANAGEMENT FOR AIRBORNE MAPPING

POSTrack tightly integrates the POS AV GNSS-Inertial direct georeferencing technology from Applanix with the XTRACK Flight Management System (FMS) from Track' Air, in one compact ruggedized system. Engineered as a single system, it is compact, convenient, and easily installed on all types of aircraft. Flight Management features include mission planning, pilot guidance, automatic stabilized mount control and automatic camera triggering at pre-planned intervals. POS AV features include in-air initialization, leveling of stabilized mounts, automatic drift correction, GNSS position translation using encoder data from stabilized mounts, and generation of Exterior Orientation of each image for the mapping process. These features significantly reduce the cost of airborne mapping by improving the efficiency of the data collection and map production process.

POSTrack puts you in control: various performance, price points and export control options allow you to build the right solution for your application and for your budget. And all POSTrack solutions can utilize the highly productive POSPac Mobile Mapping Suite (MMS) software, featuring the Applanix IN-Fusion™ technology and Applanix SmartBase™ module. POSPac MMS enables airborne missions to be flown with higher reliability and in less time, saving fuel costs and reducing environmental impact.
